consoles

Crest Audio X-VCA

Simplicity of operation may be desirable in a generic console designed for users of all levels, but for the experienced professional, such products often fail to provide necessary professional features. Rather than employing a least-common-denominator approach, the X-VCA includes those features most-desired by veteran front-of-house engineers.

Features

- 8 VCA-masters control input and group channels
- VCA assignment may be stored via onboard control system
- 4-band eq and variable high-pass filter on all input channels
- Mono inputs have full-parametric eq, while stereo inputs are sweepable in all 4 bands
- 8-channels of dynamics include variable-ratio COMPRESSOR/LIMITER and DOWNWARD EXPANDER (gate)
- Output eq and RMS-limiters on primary stereo and mono outputs
- Multiple outputs, including alternate out, matrix 1-4 and dedicated assistive listening outputs
- Direct-output on all mono input channels
- 5-segment level indication on all mono input modules, with variable intensity signal present indicator and peak indicator
- Stereo solo system features switchable AFL/PFL mode and last-pressed functions, with master solo clear switch
- Discrete bus assignment to groups, left/right and mono outputs
- True LCR panning available on mono input channels
- Separate ground-compensated insert sends and balanced returns
- Fully-balanced primary outputs and balanced mic and line inputs

microphones

Sennheiser MKE 2/NB 2 Headworn

The MKE 2 Gold is a flat frequency response, high-quality, sub-miniature clip-on lavalier microphone which is suitable for both speech and instrument miking applications in all areas of live work. It also has a multitude of applications where other clip-on microphones prove too obtrusive because of their larger size. It fulfils the most stringent demands on sound quality and is extremely rugged. A special diaphragm construction and a welded housing protect the MKE 2 Gold against sweat and moisture, making it an ideal choice for theatrical productions.

The NB 2 is a size adjustable headset adaptor that allows the MKE 2 to be quickly modified into a very high quality headworn microphone to be used with either radio or hardwired microphone systems.

Sound By Design have stock of both black and flesh coloured MKE 2's/NB 2's giving you the choice of a discreet, yet visible microphone or one that is concealed and unobtrusive.
